

Master 2.45.0

Released 25.06.2026

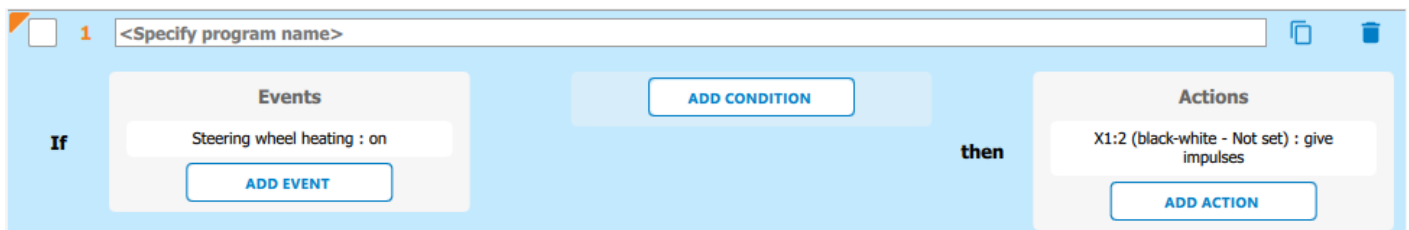

New features

1. Added processing of flexible logic programs with smart comfort events

A90 A90BT AS90 E90V2 E90V2BT E96(V2) E96(V2)E90L GEN7(V2) S96(V2)

Functions no longer need to be assigned to channels for heater and ventilation on/off events in flexible logic — those events are created automatically.

Setting example:

Fixed bugs

1. **2.X.X** **E96(V2) E96(V2)E90L GEN7(V2) S96(V2)** Optimised data immobiliser bypass for Toyota Rush RHD, 2006 - 2017
2. **2.X.X** **E96(V2) E96(V2)E90L GEN7(V2) S96(V2)** Optimised remote or auto start control via CAN-LIN. If the vehicle finishes starting earlier than the configured time, this is no longer treated as an error and does not cancel automatic starts
3. **2.44.0** **E96(V2) E96(V2)E90L GEN7(V2) S96(V2)** Fixed data immobiliser bypass control via DataLink

Known bugs

1. **2.45.0** **E96(V2) E96(V2)E90L GEN7(V2) S96(V2)** Auto and remote start may work incorrectly on some Toyota, Lexus, and Changan vehicles via CAN-LIN start, and on FAW,

Hongqi, and Mazda vehicles with factory data immobiliser bypass via CAN — in these cases, one successful auto or remote start is performed after power is applied or after security system main unit is rebooted
