

General Description

The **StarLine S9 v2** security-telematics system (hereinafter referred to as the system) is designed to protect motor vehicles from theft and armed attacks, immobilising, convenient remote control via cellular networks and location monitoring using the Global Positioning System (GPS) satellites.

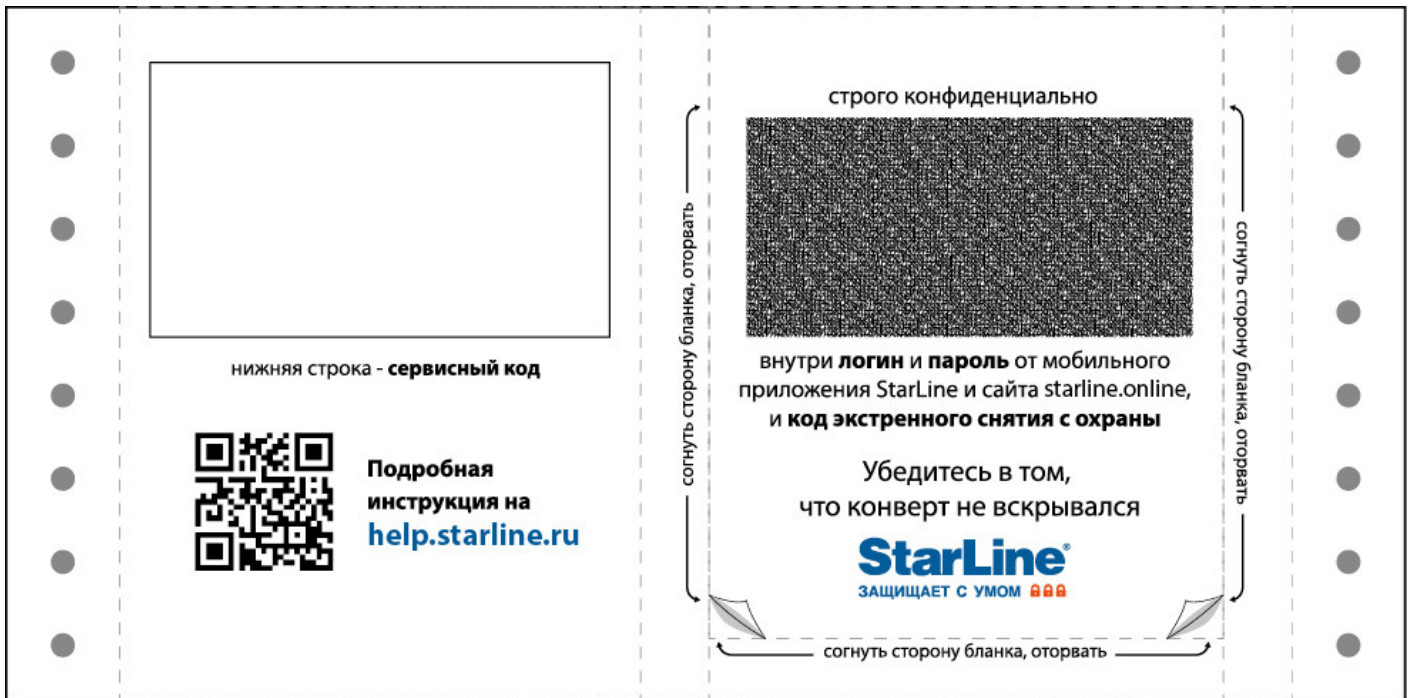

Depending on delivery set, the system can be controlled using a remote key, SMS commands, voice menu, wireless tag, the StarLine mobile application, or through the personal account on the starline.online website. To access the personal account, use the login and password provided on the owner's pin envelope included in the delivery set.

Key Features

- Support for two SIM cards.
- Built-in buzzer for convenient owner notification.
- External microphone for listening to the vehicle's interior (option, not included in the delivery set).
- "Slave" mode (arming or disarming the security mode with the vehicle's factory key or Keyless-go).
- Driver authentication by a wireless tag or smartphone via Bluetooth Smart protocol, or secret code entry using factory buttons(Pin-to-Drive).
- Anti-hijack mode by a tag loss in trip or by remote command;
- StarLine control dialogue code with individual 128-bit encryption keys, ensuring reliable protection against all known code grabbers.
- Embedded 2CAN+4LIN digital interface for easier integration with modern vehicles control circuits.
- Remote control over parking heaters and auxiliary heaters.
- Remote and automatic engine start by preset temperature, timer, battery charge level.
- Factory immobilizer bypass with external immobilizer bypass module or with embedded data immobilizer bypass via CAN, LIN interfaces.
- Vehicle location monitoring, routes logs, drive style scoring (with use of optional GPS+GLONASS receiver).
- Vehicle parameter monitoring (mileage, error codes, onboard voltage, etc.).
- Automatic data transmission to monitoring server.
- Recording and storing data in non-volatile memory ("black box"). The event log contains information about tracks for the last 1000 kilometers in city driving and 5000 kilometers on highways, as well as up to 13000 events.
- Function control and parameter display on starline.online website and in the StarLine mobile application.

- Universal programmable input and output channels.
- Universal [StarLine Master](#) application allowing for individual complex customization based on owner preferences and vehicle features, and firmware updates.

Pin Envelope

The delivery set includes a pin envelope with the following information:

- Service Code: Used for configuring the complex using the [StarLine Master](#) application.
- Emergency Disarm Code: Intended for emergency deactivation of the security system.
- Login and Password: Used for logging into the personal account on the starline.online website and in the StarLine mobile application.
- Complex Phone Number: The phone number of the SIM chip integrated into the security complex.

Do not disclose the Emergency Disarm Code to anyone! Remember that knowing the Emergency Disarm Code, an intruder could deactivate the protective functions.
